

Day 1: The Volume Trap

Morning Post (Educational)

LinkedIn Post

If you are sending the same CV to 50 different jobs, you are not actually applying. You are spamming.

Most job seekers believe job hunting is a numbers game. They spray and pray, sending out hundreds of applications, hoping someone will notice. The result? Dozens of applications, zero interview callbacks.

Recruiters don't read every CV. ATS (Applicant Tracking Systems) filter them, and recruiters scan the remaining ones in 6 seconds. If your CV doesn't directly map to the specific role's requirements, it gets rejected instantly.

Instead of applying to 10 jobs a day with one generic CV, apply to 2 jobs a day by tailoring your CV to match the job description. Highlight the exact achievements and metrics that align with what the company is actively looking for.

I've reviewed dozens of CVs, and the most common issue is a generic resume that tries to please everyone but ends up impressing no one.

Tailoring every application manually is exhausting. But there's a way to do it in minutes using AI without losing quality.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

Handwritten Visual

Handwritten Visual Text

"Applying to 50 jobs with one CV is spam, not strategy."

AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

If you are sending the same CV to 50 different jobs, you are not actually applying. You are spamming.

Most job seekers think it's a numbers game, but recruiters only spend 6 seconds scanning. If you don't match the job description, you're out.

Instead, tailor your CV for 2 jobs a day.

I've reviewed dozens of CVs, and generic ones always fail. I'm teaching the exact AI tailoring workflow at my upcoming AI Job Seeker Workshop. Seats are KES 1,000 for early birds. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

X Thread

1/ Sending the same CV to 50 different jobs isn't job hunting. It's spamming. Here is why your volume strategy is failing and how to fix it. ■

2/ Recruiters spend an average of 6 seconds scanning a resume. If they don't see direct alignment with the job description immediately, it goes to the bin.

3/ ATS (Applicant Tracking Systems) filter out resumes that don't match key context and requirements. A generic CV stands zero chance.

4/ The fix: Stop applying to 10 jobs a day. Apply to 2, but tailor them completely. Match your achievements to their specific needs.

5/ I've reviewed dozens of CVs and the generic ones are always the first to be rejected.

6/ Tailoring takes hours manually, but you can automate it with the right AI workflow.

7/ I'll be teaching this exact workflow in the AI Job Seeker Workshop. KES 1,000 early bird. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

Afternoon Post (Story / Case Study)

LinkedIn Post

He sent out 120 applications in three months. Total callbacks: Zero.

When he reached out to me, he was completely burnt out. He thought his degree was useless and that the Kenyan job market was completely rigged against him.

His CV was a list of generic responsibilities, not achievements. More importantly, he was using the exact same document for Sales roles, Marketing roles, and Operations roles.

We focused his positioning. We created a master profile and used a structured workflow to customize his CV for just three targeted roles, focusing on quantifiable impact.

One of my clients got hired this week after we stopped the spray-and-pray method and started targeting applications.

Stop sending generic CVs and hoping for a miracle. Learn how to target them effectively.

If you're serious about improving your applications, I'll show the exact system during the workshop.

He sent out 120 applications in three months. Total callbacks: Zero.

He was ready to give up, believing the market was rigged. The truth? He was using one generic CV for three different departments.

We focused his positioning and tailored his CV to show real business impact. One of my clients got hired this week because of this shift.

Stop spraying and praying. If you want the exact system, I'll show you how at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

1/ He sent out 120 applications in 3 months. Total callbacks: Zero. Here is the story of how we changed his approach and got him hired. ■

2/ When he reached out, he was burnt out. He believed the Kenyan job market was rigged. But the issue was his resume.

3/ He was using the exact same CV for Sales, Marketing, and Operations. It was a list of tasks, not achievements.

4/ We narrowed his focus. We rewrote his CV to showcase metrics and tailored it specifically to three open roles.

5/ One of my clients got hired this week using this exact methodology. It's not luck; it's positioning.

6/ If you are serious about fixing your job search, I'm showing the entire system at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

Evening Post (Workshop Invitation)

LinkedIn Post

Your job search shouldn't feel like a full-time, unpaid job that yields no results.

Most professionals spend hours tweaking fonts and margins, yet they still get standard rejection emails.

The layout doesn't get you hired; the alignment of your value to the recruiter's problem does. You need a system that does this fast.

The secret is using AI as an implementation tool, not just an information search engine. You can feed the AI the job description and your experience to identify the gaps in seconds.

I've worked with over 10 professionals to build ATS-friendly resumes that actually get read.

You don't need to guess what recruiters want. I've designed a workflow to show you exactly how to align your CV.
