

## Day 2: The Keyword Myth

### Morning Post (Educational)

#### LinkedIn Post

Jamming keywords into your CV is not "ATS optimization." It is keyword stuffing, and it will get you rejected.

Many job seekers copy and paste phrases from the job description into white text or random lists at the bottom of their resumes. They believe this tricks the system into giving them a high score.

Modern ATS are context-aware. They analyze where and how skills are mentioned. Even if you pass the system, a human recruiter will read the CV. When they see a list of terms with zero context, they click delete.

To optimize your CV correctly, place keywords within your work experience bullet points. Instead of just listing "Project Management," write: "Managed cross-functional projects to reduce delivery time by 15%."

I've reviewed dozens of CVs, and the ones filled with stuffed keywords almost always lack substance and get rejected during the initial human screen.

You must build a CV that satisfies both the software and the recruiter. You can use AI to do this without writing fake achievements.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

#### Handwritten Visual

##### Handwritten Visual Text

"Keywords need context. Buzzwords need proof."

**\*\*AI Visual Prompt**

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

### Repurposed Formats

- **Slide 1:** Title: The ATS Keyword Trap.
- **Slide 2:** The Mistake: Copying and pasting words into lists or invisible text to trick the ATS.
- **Slide 3:** The Truth: Modern systems analyze context. Recruiters spot keyword stuffing in seconds.
- **Slide 4:** The Fix: Put keywords in action-oriented bullet points with metrics.

- **Slide 5:** Call to Action: Learn the ATS prompt workflow in my upcoming workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### WhatsApp Status

- **Slide 1:** Bypassing the ATS isn't about white text or keyword lists. It's about context.
- **Slide 2:** I'll teach you how to write context-rich bullet points with AI. Join my workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### Facebook Post

Jamming keywords into your CV is not "ATS optimization." It is keyword stuffing, and it will get you rejected.

Modern ATS look for context, not just words. If a human recruiter sees a list of words with no proof, they'll delete your application immediately. Put your keywords in your bullet points alongside real metrics.

I've reviewed dozens of CVs, and stuffed resumes always fail. I'm showing how to optimize your CV using AI correctly at my upcoming AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### X Thread

1/ Stuffing keywords into your CV is not "ATS optimization." It is a fast track to rejection. Here is why the old trick of copy-pasting keywords fails. ■

2/ Job seekers think copying the job description into a hidden section of the CV will bypass the ATS.

3/ But modern ATS analyze where and how skills are used. If they don't see context, you get flagged or filtered.

4/ Even if you pass the ATS, the recruiter scans your CV next. A list of terms with zero achievements is an instant red flag.

5/ The fix: Integrate keywords into your achievement statements. "Managed budget" becomes "Allocated KES 500k budget, saving 10% on procurement."

6/ I've reviewed dozens of CVs, and context-based ones always win interviews.

7/ Learn the exact prompt system to align keywords naturally. AI Job Seeker Workshop details: <https://duncanmakoyo.com/#!/workshop>

## Afternoon Post (Story / Case Study)

### LinkedIn Post

"Can you just copy-paste these keywords into my CV so I can pass the system?"

A client came to me with a CV that looked like a glossary of industry terms. She was applying for Project Lead roles but wasn't getting any callbacks because her bullet points read like a textbook.

Recruiters don't hire a glossary. They hire someone who can solve their specific business problems. A keyword without a metric to back it up is just noise.

We sat down and mapped her actual work history. We rewrote her CV to show the *\*why\** and *\*how\** behind each key phrase. Instead of listing "Stakeholder Management," we wrote about how she managed vendor relations to deliver a project 2 weeks ahead of schedule.

One of my clients got hired this week after we focused on contextual alignment instead of basic keyword matching.

Your experience is valuable, but only if you frame it in a way that recruiters care about.

If you're serious about improving your applications, I'll show the exact system during the workshop.

## Handwritten Visual

### Handwritten Visual Text

"Recruiters hire problem solvers, not glossaries."

### AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

## Repurposed Formats

"Can you just copy-paste these keywords into my CV?"

A client asked me this because she wasn't getting callbacks. Her CV was full of words like "Stakeholder Management" but had no context.

Recruiters want problem solvers. We rewrote her CV to show how she managed vendor relations to deliver projects early. One of my clients got hired this week after we made this change.

I'll show you how to write CVs that tell stories of impact. AI Job Seeker Workshop registration link: <https://duncanmakoyo.com/##/workshop>

### **X Thread**

1/ "Can you just copy-paste these keywords into my CV?" A client asked me this when she was struggling to get interviews. Here is why we didn't do it. ■

2/ Her CV was a list of industry buzzwords. It had no narrative, no context, and no metrics.

3/ Recruiters aren't looking for a list of words. They are looking for proof that you can solve their problems.

4/ We mapped her history. Instead of listing "Stakeholder Management," we detailed how she managed vendors to deliver projects 2 weeks early.

5/ One of my clients got hired this week because of this exact change.

6/ Stop listing tasks. Start proving impact. I'll show you how at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/##/workshop>

## **Evening Post (Workshop Invitation)**

### **LinkedIn Post**

Recruiting technology is smart. Your CV needs to be smarter.

People try to trick the ATS with formatting workarounds and invisible keywords instead of focusing on tailoring their actual achievements.

The goal isn't just to bypass the ATS software. The goal is to impress the human recruiter who reads it next.

You can use AI to analyze the job description and extract the recruiter's core intent. Once you have that, you map your existing work history to those requirements in seconds.

I've worked with over 10 professionals to translate their actual experience into ATS-friendly resumes that get read.

You don't need to guess how to optimize your resume. I have built a workflow that simplifies the entire process.
