

Day 3: The Certification Illusion

Morning Post (Educational)

LinkedIn Post

Having a list of 10 certificates on your CV won't get you hired if you can't demonstrate how you applied them.

Many job seekers collect certifications like trophies, believing that a longer list of credentials makes them more competitive. They spend months studying, but their inbox remains empty.

Recruiters don't hire certificates; they hire capabilities. A certificate proves you sat through a course and passed a test. It does not prove you can solve a real-world business problem.

Replace your list of certificates with a "Projects" or "Proof of Work" section. Detail a specific problem you solved, the tools you used (including AI), and the measurable result you achieved.

I've reviewed dozens of CVs, and the ones that showcase actual projects get prioritized over those with just a list of courses.

Shift your positioning from a student who knows things to a practitioner who builds things. You can use AI to frame your projects professionally.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

Handwritten Visual

Handwritten Visual Text

"Recruiters hire capabilities, not certificates."

AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

Having a list of 10 certificates on your CV won't get you hired if you can't demonstrate how you applied them.

Recruiters want problem solvers. Instead of listing courses, create a "Proof of Work" section. Detail the problem, tools, and results. I've reviewed dozens of CVs, and the project-driven ones win.

I'll teach you how to write CVs that highlight practical implementation at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

X Thread

1/ Having a list of 10 certificates on your CV won't get you hired if you can't show how you applied them. Here is why certificates are losing value. ■

2/ Job seekers collect credentials like trophies, expecting them to open doors.

3/ But certificates only prove you consumed information. Recruiters need execution.

4/ The fix: Create a "Proof of Work" section. Highlight 2-3 projects. Explain the problem, the action, and the result.

5/ I've reviewed dozens of CVs, and project-based resumes get far more callbacks.

6/ Shift your positioning from a student to a builder.

7/ Learn the workflow to structure your CV for execution at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

Afternoon Post (Story / Case Study)

LinkedIn Post

He had three degrees and two professional certifications. Still, no interviews.

He felt cheated by the education system. He was spending KES 20,000 on another course, hoping it would make a difference, but he was still getting generic rejection emails.

His CV was purely academic. It listed coursework and modules but didn't show what he could actually *do* for a company day-to-day.

We stripped away the minor certifications. We added a dedicated "Proof of Work" section detailing two actual projects where he built systems and saved money.

One of my clients got hired this week after we pivoted his CV from listing credentials to showing proof of work.

You don't need another expensive certification. You need to show you can implement.

If you're serious about improving your applications, I'll show the exact system during the workshop.

He had three degrees and two certifications. Still, no interviews. He thought the solution was another course.

The issue was his CV was purely academic. We stripped the minor credentials and added a "Proof of Work" section showing real business value. One of my clients got hired this week after this shift.

Stop buying courses. Start showing execution. Join the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

1/ He had three degrees and two professional certifications. Still, zero interviews. Here is how we got him out of the academic trap. ■

2/ He was ready to pay KES 20,000 for another course. He thought his credentials weren't enough.

3/ The issue: His CV listed theories, not results. Recruiters didn't see any execution.

4/ We removed the fluff. We created a "Proof of Work" section detailing two real projects.

5/ One of my clients got hired this week because of this exact change.

6/ You don't need another course. You need to show you can do the work.

Evening Post (Workshop Invitation)

LinkedIn Post

In 2026, recruiters are looking for implementation, not information.

Most job seekers present themselves as students of the industry rather than active practitioners.

AI has made information free and accessible. What companies value now is your ability to execute and use tools to drive results.

You can use AI to structure your projects and experience in a clear, high-impact format that shows execution.

I've worked with over 10 professionals to restructure their CVs around practical execution.

I'm running a workshop to show you how to build a portfolio of proof on your CV.
