

Day 5: The Tailoring Bottleneck

Morning Post (Educational)

LinkedIn Post

If it takes you three hours to tailor your CV for a single job description, your process is broken.

Many job seekers spend half a day rewriting their career history for one application. They analyze every line, match every keyword manually, and end up too exhausted to apply for other opportunities.

You should not start from scratch for every job. The key is to have a modular master CV and a structured workflow that tells you exactly which parts of your experience to swap out.

Create a master CV with all your career details. When applying, use AI to compare your master CV with the target job and extract only the bullet points that match their criteria.

I've reviewed dozens of CVs, and the most successful candidates are those who use a modular system to target roles quickly without sacrificing quality.

Tailoring is about strategic alignment, not starting over. You can use AI to do this in under 10 minutes.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

Handwritten Visual

Handwritten Visual Text

"Tailoring is modular, not a total rewrite."

AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

If it takes you three hours to tailor your CV, your process is broken.

Job seekers burn out because they rewrite their resumes from scratch. Instead, build a modular master CV and use AI to extract only what is relevant to the target job description.

I've reviewed dozens of CVs, and modular resumes get better results. I'm teaching the exact workflow at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

Afternoon Post (Story / Case Study)

LinkedIn Post

She was applying to only one job every two days because tailoring took her too long.

She was exhausted. She would spend hours tweaking keywords, but by the time she finished, she was too tired to write a good cover letter or prepare for networking.

She was trying to rewrite her entire professional history for every job description, instead of using a modular template.

We built a master profile for her and used an AI workflow to map and extract matching bullet points in minutes. Suddenly, she could customize her CV for three roles in one afternoon.

One of my clients got hired this week after we streamlined her tailoring process, allowing her to target roles faster.

You don't need to work harder; you need a system that does the heavy lifting for you.

If you're serious about improving your applications, I'll show the exact system during the workshop.

Evening Post (Workshop Invitation)

LinkedIn Post

Stop choosing between speed and quality in your job applications.

Most job seekers either send generic CVs quickly (low quality) or spend hours tailoring one CV (low speed). Both approaches limit your chances.

The solution is a high-speed, high-quality AI workflow that allows you to target roles accurately in under 10 minutes.

The secret is using AI to map your experiences to the job description without starting from scratch.

I've worked with over 10 professionals to implement this exact high-efficiency application system.

I'm teaching the step-by-step modular CV system in my upcoming workshop.
