

# Day 6: ChatGPT Is Not Your Writer

## Morning Post (Educational)

### LinkedIn Post

If your CV contains words like "delve," "testament," "leverage," or "revolutionized," recruiters know you copied and pasted from ChatGPT.

Many job seekers use generic prompts like "write a CV for a Sales Manager." ChatGPT spits out paragraphs of flowery corporate jargon that lacks substance. Recruiters read dozens of CVs daily and spot these AI patterns instantly.

Using AI without context and structure makes your application look generic and lazy. Recruiters want to read about your specific achievements, not a chatbot's idea of what a generic employee does.

Use AI as a structural analyzer and editor, not a writer. Prompt ChatGPT to analyze your own drafts, specify a direct, professional tone, and forbid it from using corporate buzzwords.

I've reviewed dozens of CVs, and the difference between a generic AI copy-paste and a resume refined with professional prompting is night and day.

You must retain your authentic voice while using AI to improve clarity and alignment.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

### Handwritten Visual

#### Handwritten Visual Text

"AI is your editor, not your ghostwriter."

#### AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

## Repurposed Formats

### Facebook Post

If your CV contains words like "delve," "testament," "leverage," or "revolutionized," recruiters know you copied and pasted from ChatGPT.

Generic AI prompts produce generic resumes. Recruiters read dozens of CVs daily and spot the patterns instantly. Use AI as an editor, not a writer. Feed it your raw draft and tell it to write simply.

I've reviewed dozens of CVs, and robotic AI resumes get rejected first. Learn correct AI prompting at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### X Thread

1/ If your CV contains words like "delve," "testament," or "leverage," recruiters know you copied and pasted from ChatGPT. Here's why that's a problem. ■

2/ Job seekers use generic prompts. ChatGPT responds with generic, flowery corporate language.

3/ Recruiters scan dozens of resumes daily. They recognize these AI writing patterns instantly.

4/ When they see them, they assume you didn't put effort into your application.

5/ The fix: Use AI as an editor, not a writer. Feed it your actual experience and tell it to write in a simple, direct tone.

6/ I've reviewed dozens of CVs, and authentic voice always wins over AI fluff.

7/ Learn the exact prompt guidelines at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

## Afternoon Post (Story / Case Study)

### LinkedIn Post

He applied with a CV that claimed he "spearheaded cross-functional paradigms." He got zero replies.

He had excellent technical skills, but he let ChatGPT write his entire resume. The output was so filled with flowery language that his actual achievements were completely buried.

AI does not know what you did; it only knows language patterns. If you do not feed it specific metrics and facts, it invents generic text to fill the space.

We stripped the AI jargon. We fed ChatGPT his actual project metrics and prompted it to rewrite his bullet points in a direct, conversational style. Suddenly, his CV showed he helped a company save KES 100,000 on cloud costs.

One of my clients got hired this week after we removed the robotic AI fluff and restored his actual proof of work.

Stop letting AI make you sound like a robot. Learn how to guide it with context.

If you're serious about improving your applications, I'll show the exact system during the workshop.

## Handwritten Visual

### Handwritten Visual Text

"Recruiters hire humans, not language models."

### AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

### X Thread

1/ He applied with a CV that claimed he "spearheaded cross-functional paradigms." He got zero replies. Here's what we did to fix it. ■

2/ He let ChatGPT write his CV. Because AI doesn't know his actual work, it filled the pages with corporate jargon.

3/ Recruiters couldn't see what he actually built. It just looked like AI spam.

4/ We stripped the buzzwords. We fed the AI his cloud migration metrics and forced a simple, direct style.

5/ One of my clients got hired this week after we replaced the AI fluff with real proof of work.

6/ Guide the tool; don't let it write for you.

## Evening Post (Workshop Invitation)

### LinkedIn Post

AI is a powerful tool, but copy-pasting from ChatGPT is a major career risk.

Most job seekers know ChatGPT exists, but they do not know how to prompt it professionally for their job search. They end up with resumes that look like templates.

The difference between spam and strategy is the quality of your prompting workflow.

A professional prompt doesn't just ask for a CV; it defines the target role, sets constraints, provides raw metrics, and outlines specific formatting rules.

I've worked with over 10 professionals to build resumes using advanced prompting workflows rather than generic copy-pasting.

I'm sharing the exact prompts and constraints I use to get clean, professional CV bullet points.
