

# Day 13: Two Days to Go (Only 3 Seats Left)

## Morning Post (Educational)

### LinkedIn Post

There is a massive difference between knowing ChatGPT exists and knowing how to use it to land a job.

Many job seekers copy-paste basic prompts they find on social media. They get a generic resume, submit it, and wonder why they are still getting automated rejection emails.

Generic prompts produce generic outputs. To stand out, you need a structured, context-rich workflow that translates your actual experience into high-impact, recruiter-ready achievements.

When using AI, always: (1) Assign a professional persona to the AI, (2) Feed it the exact job requirements as source data, (3) Input your raw metrics, and (4) Direct it to write in a simple, direct tone with no buzzwords.

I've reviewed dozens of CVs, and the resumes built with structured, context-based prompts consistently outperform those built with basic, one-line prompts.

Stop using basic prompts that make you sound like a robot. Learn to prompt like a professional.

If this sounds familiar, I'll be teaching the complete workflow inside my upcoming AI Job Seeker Workshop. Seats are limited.

### Handwritten Visual

#### Handwritten Visual Text

"Basic prompts write robotic CVs. Expert prompts get interviews."

#### AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

## Repurposed Formats

### LinkedIn Carousel

- **Slide 1:** Title: ChatGPT: Tool or Trap?
- **Slide 2:** The Mistake: Prompting "Write a CV for an accountant".
- **Slide 3:** The Problem: Robotic tone, fake achievements, instant recruiter rejection.
- **Slide 4:** The Fix: Use persona, context, raw metrics, and direct tone constraints.
- **Slide 5:** 2 Days Left: AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### WhatsApp Status

- **Slide 1:** Stop using ChatGPT like a search engine for your CV. Use it as a structural editor.
- **Slide 2:** Learn the expert prompting workflow. Workshop in 2 days. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### Facebook Post

There is a massive difference between knowing ChatGPT exists and knowing how to use it to land a job.

Copy-pasting basic prompts produces generic resumes that get rejected. You need a context-rich prompting workflow. I've reviewed dozens of CVs and found that structured prompts win.

I'm teaching the exact prompt sequences at the AI Job Seeker Workshop. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>

### X Thread

- 1/ There is a massive difference between knowing ChatGPT exists and knowing how to use it to land a job. ■
  - 2/ Social media prompts are too basic. They produce generic resumes that recruiters reject instantly.
  - 3/ To get results, you need a structured workflow.
  - 4/ Assign a persona to the AI, feed it job-specific context, input raw numbers, and enforce a direct tone.
  - 5/ I've reviewed dozens of CVs, and context-based prompting consistently gets more callbacks.
  - 6/ Stop sending resumes that sound like a chatbot wrote them.
  - 7/ AI Job Seeker Workshop starts in 2 days. Workshop registration link: <https://duncanmakoyo.com/#!/workshop>
- 

## Afternoon Post (Story / Case Study)

### LinkedIn Post

He went from a generic AI-written CV to an interview callback in 48 hours.

He let ChatGPT write his resume with no guidelines. The output was so full of buzzwords and empty text that his real achievements were invisible. He applied to 20 roles and got zero replies.

Recruiters reject resumes that sound like they were written by a machine. They want facts, not generic corporate jargon.

We rebuilt his prompting process. We fed the AI his actual project metrics and told it to write in a direct, simple style. He applied to three targeted roles, and in 48 hours, he got his first callback.

One of my clients got hired this week after we changed his prompting workflow and targeted his applications.

You don't need to change your career history; you just need to prompt the AI to present it correctly.

If you're serious about improving your applications, I'll show the exact system during the workshop.

## Handwritten Visual

### Handwritten Visual Text

"Metrics speak louder than corporate jargon."

### AI Visual Prompt

Minimalist overhead photo of clean white paper. The sentence is handwritten neatly in thick black marker. Natural lighting. No hands. No notebook. No decorations. High contrast. Mobile friendly. Lots of white space. Instagram and LinkedIn optimized.

## Evening Post (Workshop Invitation)

### LinkedIn Post

We start in 48 hours, and we only have 3 seats left.

Many job seekers delay registering and miss the opportunity to join the live session and ask questions.

Regular tickets are KES 1,500. This is the final live session I will run this month on Google Meet.

Get the exact prompts, the ATS-safe Word template, and watch me tailor a resume live during the session.

I've worked with over 10 professionals to help them scale their application process and land roles.

Secure your seat tonight before the workshop is completely sold out.
